

MPE+

Mobile Phone Examiner *Plus*
and the MPE+ Field Tablet

Mobile Phone Examiner Plus (MPE+) delivers the ease of use, depth of analysis and level of phone support that computer forensic examiners demand.

Preconfigured MPE+ Field Tablet enables instant onsite triage

Integrates seamlessly with FTK 3.x

Supports more than 2500 phones.

File system support for 80% of current CDMA phones

New MPE+ software offers greater phone support and depth of analysis, while the MPE+ Field Tablet delivers the advanced functionality of MPE+ in the field for instant onsite triage.

MPE+ is available as a software-only solution for the lab, or on a preconfigured Field Tablet for onsite phone acquisitions. The tablet allows you to preview and acquire all data available on supported handsets, including the embedded file systems. Having this information immediately available for on-scene triage will save time for the examiner back at the lab, while also immediately securing the digital evidence--unlocking locked handsets, previewing extracted data and creating a secure image.

MOBILE PHONE EXAMINER *PLUS* SOFTWARE

Mobile Phone Examiner Plus integrates with Forensic Toolkit® 3.x.

This integration allows you to correlate phone evidence with computer evidence easily and enables advanced reporting to detail phone data — call history, contacts, messages, photos, voice recordings, video files, calendar, tasks, notes and more. FTK is able to recover and document files that no other mobile phone analysis tool on the market can. With support for more than 2500 phones, as well as the ability to seamlessly analyze and correlate phones and computers within a single software solution, MPE + is the must-have mobile phone analysis software.

- View and acquire file systems on approximately 80% of all CDMA phones.
- Extracted data is stored in an AD1 forensic container.
- AD1s can be imported back into MPE+ to view data as if the device is connected.
- Locate lock codes, EXIF and more.
- New and improved cable kit is also available.

RUGGED MPE+ FIELD TABLET

- Instant on-site triage
- Anti-glare screen
- Rugged design
- Shock resistant
- Water resistant
- Touch screen designed to work, even with heavy gloves on
