

## Captures Data from Cell Phones, PDAs & GPS devices in Less Than 5 Minutes!

The Logicube® CellDEK® is an affordable and easy to use data extraction solution that delivers the advanced features that forensic investigators require. This device captures standard data from cell phones, PDAs and GPS devices in less than 5 minutes. MD5 hash is used for data integrity and security and CellDEK provides direct connection via cable, IR (infrared) or Bluetooth®. Intelligent self-selecting device adapters quickly light up to match the selected phone or PDA, no need to manually sort through adapters or reference guides trying to find the correct cable.

The CellDEK is an all-in-one solution that features an embedded touch screen display. Perfect for field investigations, the CellDEK allows investigators to immediately begin reviewing captured data on-scene. Currently in use by government and military organizations world-wide, The CellDEK solution is based on proven technologies that were designed exclusively for forensic investigations.

Compatible with 2000 handsets including Apple® iPhone™, Blackberry™ and GPS devices

Intuitive light-up adapters quickly match to selected device

Real-time data acquisition – view captured data on-scene
